

Does your young child have severe-to-profound vision or hearing loss?

They might be eligible to participate in word-learning research with Duke CHILD Studies!

Children with Visual Impairment

Baby wears an audio recorder inside a soft vest for one day to study the home language environment

WHAT does the study involve?

- Online surveys about your child's language and development
 - Compensation for surveys: \$20
- *Optional*: one day-long home recording where your child wears an audio recording device designed for child language research.
 - Compensation for survey & recording: \$55

The lab would arrange for pickup and drop off of the recorder and vest and would not be present for the day of recording.

Children who are Deaf or Hard of Hearing who can hear at a conversational volume with language technology (i.e. CIs, HAs)

Eye tracking is used to study word comprehension in the lab

WHAT does the study involve?

- Online surveys about your child's language and development
 - Compensation for surveys: \$20
- *Optional*: one 45-minute visit to the Bergelson Lab on Duke's West Campus for an eye-tracking study on spoken word understanding
 - Compensation for survey and lab visit: \$40

The lab provides free parking during your visit and can provide babysitting for siblings during the brief eyetracking study.

WHY should you participate?

This study will help researchers understand more about how infants and toddlers with sensory impairments learn language.

All children will receive a commemorative gift for their participation.

To find out more please call the Bergelson Lab at (919) 684-9429 or email erin.e.campbell@duke.edu

This research is conducted by Dr. Erika Bergelson, in Duke's Psychology & Neuroscience Department
