

Connecting Devices to BYOD-Students

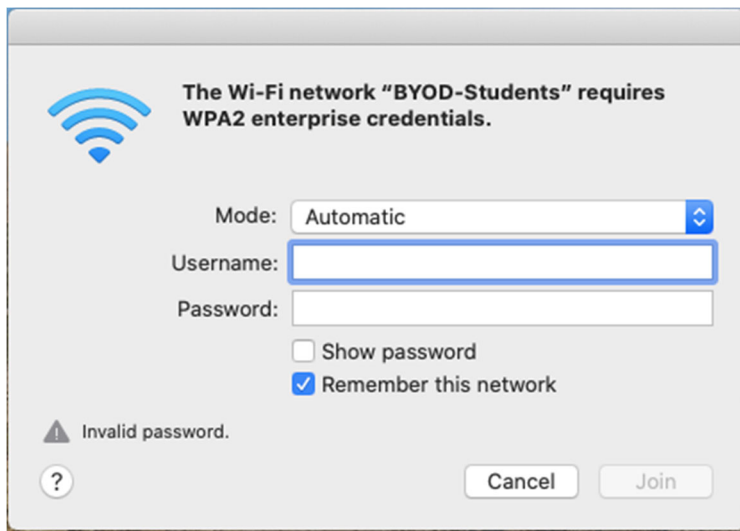

Windows 10:

Students will need to enter their PCS username (the portion before the @ in their email) and their password.

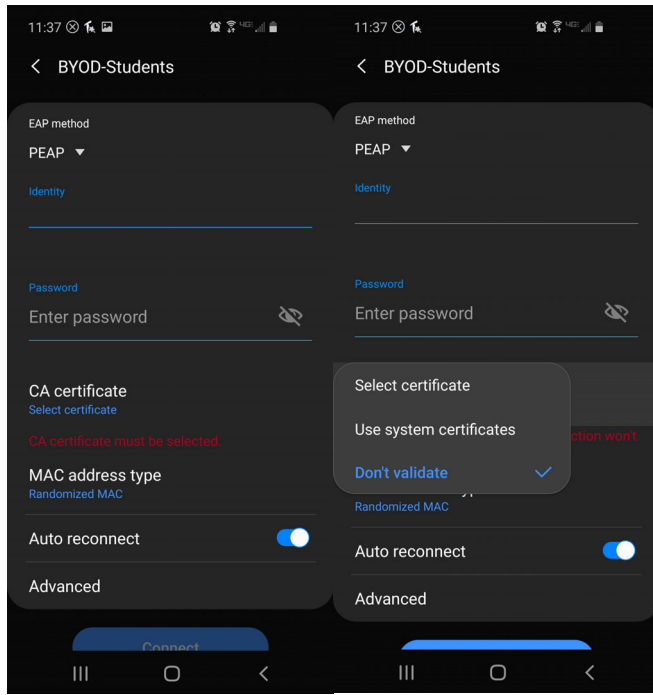

MACOS

For MACOS it is the same process. Username and password. Mode can be left as Automatic

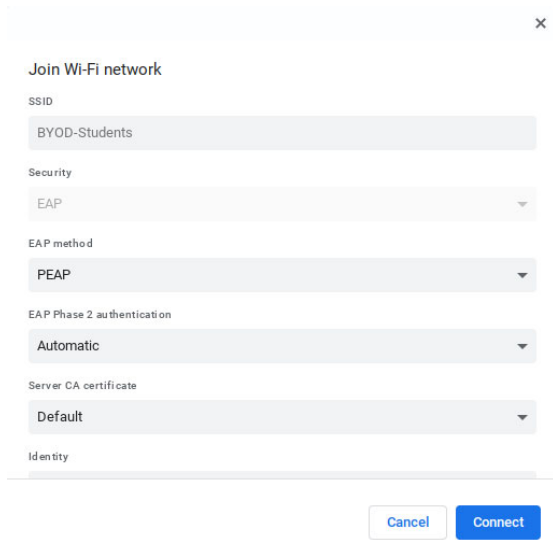

Android

For Android students will need to set the EAP method to PEAP. Students will need to enter their Identity which is their PCS username (just the portion before the @ in their email) and their PCS password. For CA certificate you will need to tell your device to “Don’t Validate”.

Chromebook

For Chromebooks the process is similar to that of Android. EAP method needs to be set as PEAP. Phase 2 authentication is set to automatic. Students will use their username for the Identity, and their password for the password.

IOS

For IOS devices (iPads/iPhones) you will need to enter your PCS Username and Password and then press the “Join” option in the upper right. You will see a certificate window appear. You will need to trust the certificate on your device by tapping the “Trust” option in the upper right.
